LIST OF STANDARD REFERENCES FOR ANIMAL SPECIES

1. The annex to this document has been submitted by the zoologist of the Nomenclature Committee.
2. The list can be accessed via the CITES website, under Nomenclature Committee.

LIST OF STANDARD REFERENCES FOR ANIMAL SPECIES ACCORDING TO RESOLUTION 12.11 (REV. COP13)

Arranged according to systematic order, alphabetically according to taxon on family-level and below  
Compiled by the Co-Chair (Zoology) of the Nomenclature Committee

Introduction

With regard to animal species CITES has adopted 83 taxonomic standard references for different taxon levels (from class to species). Resolution Conf. 12.11 (Rev. CoP13) lists these references alphabetically according to authors' name under the headings of the animal classes. As a result it is quite cumbersome to look for the accepted reference for a specific taxon below class level (order, family or species). The zoological Co-Chair of the Nomenclature Committee has therefore re-arranged the references and put them into the table below (in English only) in order to simplify the search for the references of specific taxa. References which have not been formally published but are available as a CoP or NC document (marked in blue) can be downloaded directly from this table.
