## **ABOUT UNEP WORLD CONSERVATION MONITORING CENTRE**

[www.unep-wcmc.org](http://www.unep-wcmc.org)

The UNEP World Conservation Monitoring Centre is the biodiversity assessment and policy implementation arm of the United Nations Environment Programme (UNEP), the world's foremost intergovernmental environmental organisation. UNEP-WCMC aims to help decision-makers recognize the value of biodiversity to people everywhere, and to apply this knowledge to all that they do. The Centre's challenge is to transform complex data into policy-relevant information, to build tools and systems for analysis and integration, and to support the needs of nations and the international community as they engage in joint programmes of action.

**UNEP-WCMC** provides objective, scientifically rigorous products and services that include ecosystem assessments, support for implementation of environmental agreements, regional and global biodiversity information, research on threats and impacts, and development of future scenarios for the living world.

## **Summary of the differences in taxonomy between the second and third editions of *Mammal Species of the World* (Wilson & Reeder, 1993 & 2005)**

The following lists all the differences between the second and third editions of *Mammal Species of the World*, with a brief description of the type of change that has been made. Some of the changes have already been adopted by the CITES Nomenclature Committee and a note is appended to each of these. Also listed are the few cases where the Nomenclature Committee has agreed to use names based on wild rather than domestic forms of species, and thus has conflicted with both editions of *Mammal Species of the World*.

Where two names are listed, separated by an '=' sign the name on the left is that currently adopted by the CITES Nomenclature Committee, and that on the right is that used by the third edition of *Mammal Species of the World*. A key of the types of changes made is appended to this document.

## Key

Generic change	The species or subspecies has been transferred from one genus to another
Lump	The species or subspecies is now considered to be a synonym of the taxon to the right
New species	Newly described since (or overlooked) by the second edition of <i>Mammal Species of the World</i>
Nomen nudum	A species or subspecies name that has no associated published description and is therefore invalid
Replacement name	A name to replace the original name for the species or subspecies, which was found to be invalid
Spelling	A correction to the spelling of the name of a species or subspecies
Split	The original species is now considered to comprise two (or more) separate species
