

OUTPUTS OF THE ASSESSMENT UNDERTAKEN IN ACCORDANCE WITH THE ANNEX OF  
RESOLUTION CONF. 14.8 (REV. COP19) ON THE PERIODIC REVIEW OF SPECIES INCLUDED  
IN APPENDICES I AND II

FAUNA

Assessment conducted by UNEP-WCMC under an agreement signed with the CITES Secretariat

Data included in the Output tables

Data for inclusion in Outputs 1, 3 and 4 of the periodic review were extracted from the CITES Trade Database (<https://trade.cites.org/>) 12<sup>th</sup> April 2024<sup>1</sup>. Where trade was reported at subspecies level, but the relevant CITES listing is at species level, trade data were resolved to species level. Details of the data used for each Output are provided in Table 1, and details of contextual information included in each Output are listed in Table 2.

**Table 1.** Trade data components used to generate Outputs 1, 3 and 4 defined under Resolution Conf. 14.8 (Rev. CoP19). Output 2 is covered by the RST post-CoP19 summary output ([AC32 Doc 14.02](#)).

	Output 1	Output 3	Output 4		
Description	“Wild” sourced trade in Appendix I	No/minimal trade in Appendix I	No/minimal trade in Appendix II		
CITES Trade Database report type	Direct trade only (re-exports are excluded)				
	Exporter and importer-reported data	Exporter-reported data only			
Appendix	Appendix I <sup>2</sup>	Appendix I <sup>3</sup>	Appendix II		
Source codes <sup>4</sup>	W, R, U, X and unreported	All source codes. Only taxa with less than or equal to five trade records <sup>5</sup> for both (i) sources C and D and (ii) all other sources, were retained			
Purpose codes <sup>4</sup>	T and unreported <sup>6</sup>	All purpose codes			
Term codes <sup>4</sup>	All term codes				
Units of measure	All unit codes converted to standard units of measure (e.g., grams to kilograms or millilitres to litres) <sup>7</sup> . Units reported as ‘NAR’ (number of specimens) and blank were resolved to number of specimens.				
Year range	2013-2022 <sup>8</sup>				

<sup>1</sup> Includes all CITES annual reports and query responses received by UNEP-WCMC by 14/01/2024. Only data representing direct trade was extracted (i.e., origin = blank). This analysis may not fully capture all trade in specimens taken in the marine environment from areas beyond national jurisdiction; for details on this see page 3 of [AC32 Doc. 14.2](#).

<sup>2</sup> Including trade reported in (a) Appendix I populations of split-listed taxa, and (b) Appendix I higher taxonomic groups.

<sup>3</sup> For CITES-listed taxa with no trade reported, a precautionary treatment of split-listed taxa (i.e., those with a listing of “I/II” according to the Species+) was made, with such taxa included in Output 3 instead of Output 4.

<sup>4</sup> A full list and description of source, purpose and term codes is available in the [CITES Trade Database user guide](#)

<sup>5</sup> A trade record was defined as a unique row of trade in a CITES annual trade report, forming all or part of a reported permit and with a quantity greater than zero.

<sup>6</sup> Taking a precautionary approach, trade in Appendix I taxa reported without a purpose was also included in Output 1 since this may have included commercial purposes.

<sup>7</sup> For details on the standardisation steps performed on the trade data see the following [Methods](#) document from TradeView.

<sup>8</sup> Trade data for 2022 may appear lower than other years due to missing annual reports; annual reports for 2022 from 65% of Parties were included in the analysis.

**Table 2.** Overview of contextual information included in the Output tables.

	Output 1	Output 3	Output 4
<b>Global conservation status and population trend</b> of a given taxon, if assessed, as published in the IUCN Red List of Threatened Species, as well as the <b>year it was last assessed</b> <sup>9</sup> .	✓	✓	✓
The <b>year that a taxon was first listed under CITES</b> , alongside the <b>year it was listed in its current Appendix</b> (if different)	✓	✓	✓
<b>Parties with reservations in place</b> <sup>10</sup>	✓	✓	✓
A list of <b>native range States</b> for a given species <sup>11</sup>	✓	✓	✓
<b>Percentage of wild-sourced trade in a given taxon represented by a given exporter</b> <sup>12</sup> . Exporters accounting for <0.1% of total trade are not reported in the table.	✓		
<b>Percentage of wild-sourced trade in a given taxon represented by a given importer</b> <sup>12</sup> . Importers accounting for <0.1% of total trade are not reported in the table.	✓		
<b>Percentage of wild-sourced trade in a given taxon represented by a given source code</b> <sup>12</sup> . Source codes accounting for <0.1% of total trade are not reported in the table.	✓		

The following taxa were excluded from all Outputs, as outlined in Resolution Conf. 14.8 (Rev. CoP19) paragraphs 2 and 3 b) ii) A-C:

- Taxa subject to listing proposals at CoP17, CoP18 or CoP19, independent of whether the proposals were adopted<sup>13</sup>;
- Taxa subject to ongoing reviews, under the Review of Significant Trade (Resolution Conf. 12.8 (Rev. CoP18)), or periodic review process conducted within the last 10 years (post-CoP15 onwards);
- Taxa subject to other reviews targeted by valid Decisions and Resolutions of the 19<sup>th</sup> CoP<sup>14</sup>; and
- All ‘great whales’ (here identified as all species of baleen whale (families Balaenopteridae, Balaenidae, Eschrichtiidae and Neobalaenidae), along with the sperm whale (*Physeter macrocephalus*))

No species were excluded on the basis of paragraph 3 b) ii) D of the Resolution ('species for which it is clear that there has been no change in the status, range or trade and for which there is no possibility to need to amend the Appendices'), since this exclusion requires further refinement of a methodology to calculate and define 'no change'.

<sup>9</sup> IUCN Red List data (Version 2023-1) downloaded on 07/02/24. <https://www.iucnredlist.org/en>.

<sup>10</sup> Data on reservations obtained from the CITES Checklist, downloaded 03/04/2024. <https://checklist.cites.org/#/en>

<sup>11</sup> Native Range States for each taxon were defined as those with the following distribution tags on Species+: ‘Native’, ‘Reintroduced’ or ‘Origin Uncertain’. <https://www.speciesplus.net/>.

<sup>12</sup> Assessed separately for purpose codes ‘T’ and unreported. Calculated across terms and units for a given taxon.

<sup>13</sup> This did not include taxa subject to changing hash annotations.

<sup>14</sup> Taken as all valid Decisions and Resolutions where the scientific name of the species or higher taxon was named in the title, except for Decisions relating to nomenclature that did not relate to the trade or conservation status of the taxon.

### **Output 1: “Wild” sourced trade in Appendix I taxa (Table 3)**

Key to Table 3 (Output 1 of the Annex of Resolution Conf. 14.8 (Rev. CoP19))

**Purpose:** T = Commercial, - = Not reported.

**Term and unit:** for a full list of term codes and their definitions see the CITES Trade Database user guide<sup>15</sup>. Trade in the unit ‘blank’ includes trade data reported with the unit code ‘NAR’ (number of specimens) or where the unit column has been left blank.

**Trade summaries:** exporter- and importer-reported quantities of trade per Appendix I-listed taxon, purpose, term and unit. Quantities are rounded to the nearest decimal place. ‘0’ indicates that no trade from wild sources (W, R, U, X and unreported) was reported between 2013-2022 with either purpose code T (commercial) or unreported; trade may have occurred under different purpose codes.

**Exporters and importers (% trade):** list of direct exporters and importers of wild-sourced (W, R, U, X and unreported) trade, provided as ISO2 codes (see Appendix 1 for full country/territory names) and ranked by % of wild-sourced trade each exporter or importer accounted for<sup>16</sup>. Percentages are correct to 1 decimal place; exporters and importers accounting for <0.1% of total trade are not included. For a full list of source codes and their definitions see the CITES Trade Database user guide<sup>15</sup>.

**Source (% trade):** W = Wild, R = Ranned, U = Unknown, - = Not reported. Ranked by % of trade<sup>16</sup>. Sources accounting for <0.1% of total trade are not included. No relevant trade was reported under source X (specimens taken in the marine environment beyond the jurisdiction of any State).

**Red List status:** EX = Extinct, EW = Extinct in the Wild, DD = Data Deficient, NE = Not Evaluated, LC = Least Concern, NT = Near Threatened, VU = Vulnerable, EN = Endangered, CR = Critically Endangered. ‘NE’ represents a taxon which has not yet been assessed at the global level.

**Population trend** in brackets: (→) = stable population trend; (↓) = decreasing population trend; (↑) = increasing population trend; (?) = unknown population trend.

**IUCN year of assessment:** in brackets, e.g. (2011).

**Range States and Parties with reservations:** included as ISO2 codes, see Appendix 1 for full country/territory names.

**Year CITES listed:** the year a given taxon was first listed in its current CITES Appendix, with the year first listed in CITES (if originally listed in a different Appendix) provided in parentheses.

*Note that some taxa (e.g. Chlamydotis macqueenii) may be included in Output 1 on the basis of trade reported by the country/territory of import, and not due to reporting on the part of the country/territory of export.*

---

<sup>15</sup> [https://trade.cites.org/cites\\_trade\\_guidelines/en-CITES\\_Trade\\_Database\\_Guide.pdf](https://trade.cites.org/cites_trade_guidelines/en-CITES_Trade_Database_Guide.pdf)

<sup>16</sup> Calculated based on gross exports, whereby quantities reported by the exporter and importer are compared and the largest quantity is taken based on data aggregated by year, taxon, term, unit, source, purpose, exporter and importer.

**Table 3. Output 1:** Summary of **Appendix I** taxa traded from wild sources (W, R, U, X and unreported) over the period 2013-2022 for commercial purposes or an unreported purpose. Trade data extracted from the CITES Trade Database on 12<sup>th</sup> April 2024. See Key on page 3.

### **Output 3: No/minimal trade in Appendix I taxa (Table 4)**

Key to Table 4 (Output 3 of the Annex of Resolution Conf. 14.8 (Rev. CoP19))

**Taxon:** All taxa that are only included under higher taxonomic listings (e.g. Pristidae spp.) were excluded. Species (or subspecies) that are listed in their own right but are also subject to a higher taxon listing were not excluded. Trade reported at a higher taxonomic level (i.e. above species level) and trade in hybrids were also excluded.

**Trade summaries:** number of trade records<sup>17</sup> for a given Appendix I-listed taxon<sup>18</sup> between 2013-2022, exporter-reported trade only, for (i) source codes C and D and (ii) all other source codes (including wild-source). The number of trade records for all other source codes (ii) was then disaggregated into wild sources (W, R, U, X and unreported) and all remaining source codes to enable further interpretation. '0' represents no trade records reported for the specified source codes. For a full list of source codes and their definitions see CITES Trade Database user guide<sup>19</sup>.

**Red List status:** EX = Extinct, EW = Extinct in the Wild, DD = Data Deficient, NE = Not Evaluated, LC = Least Concern, NT = Near Threatened, VU = Vulnerable, EN = Endangered, CR = Critically Endangered. 'NE' represents a taxon which has not yet been assessed at the global level.

**Population trend** in brackets: (→) = stable population trend; (↓) = decreasing population trend; (↑) = increasing population trend; (?) = unknown population trend.

**IUCN year of assessment:** in brackets, e.g. (2011).

**Range States and Parties with reservations:** included as ISO2 codes, see Appendix 1 for full country/territory names. Where no extant range States were listed in Species+, the extinct or possibly extinct range State(s) are listed with 'extinct' or 'extinct?' indicated in parentheses.

**Year CITES listed:** the year a given taxon was first listed in its current CITES Appendix, with the year first listed in CITES (if originally listed in a different Appendix) provided in parentheses.

---

<sup>17</sup> A trade record was defined as a unique row of trade in a CITES annual trade report, forming all or part of a reported permit and with a quantity greater than zero.

<sup>18</sup> A precautionary approach for split-listed taxa with no reported trade was applied.

<sup>19</sup> [https://trade.cites.org/cites\\_trade\\_guidelines/en-CITES\\_Trade\\_Database\\_Guide.pdf](https://trade.cites.org/cites_trade_guidelines/en-CITES_Trade_Database_Guide.pdf)

**Table 4. Output 3:** Summary of **Appendix I** taxa for which there has been less than or equal to five trade records for both (i) sources C and D and (ii) all other sources (wild and ‘other sources’ combined), between 2013-2022. Species/subspecies included in higher taxon listings (e.g. Pristidae spp.) are not included. Trade data extracted from the CITES Trade Database on 12<sup>th</sup> April 2024. See Key on page 8.

#### **Output 4: No/minimal trade in Appendix II taxa (Table 5)**

Key to Table 5 (Output 4 of the Annex of Resolution Conf. 14.8 (Rev. CoP19))

**Taxon:** All taxa that are only included under higher taxonomic listings (e.g. Felidae spp.) were excluded. Species (or subspecies) that are listed in their own right but are also subject to a higher taxon listing were not excluded. Trade reported at a higher taxonomic level (i.e. above species level) and trade in hybrids were also excluded.

**Trade summaries:** number of trade records<sup>22</sup> for a given Appendix II-listed taxa between 2013-2022, exporter-reported trade only, for (i) source codes C and D and (ii) all other source codes (including wild-source). The number of trade records for all other source codes (ii) was then disaggregated into wild sources (W, R, U, X and unreported) and all remaining source codes to enable further interpretation. '0' represents no trade records reported for the specified source codes. For a full list of source codes and their definitions see the CITES Trade Database user guide<sup>23</sup>.

**Red List status:** EX = Extinct, EW = Extinct in the Wild, DD = Data Deficient, NE = Not Evaluated, LC = Least Concern, NT = Near Threatened, VU = Vulnerable, EN = Endangered, CR = Critically Endangered. 'NE' represents a taxon which has not yet been assessed at the global level.

**Population trend** in brackets: (→) = stable population trend; (↓) = decreasing population trend; (↑) = increasing population trend; (?) = unknown population trend.

**IUCN year of assessment:** in brackets, e.g. (2011).

**Range States and Parties with reservations:** included as ISO2 codes, see Appendix 1 for full country/territory names. Where no extant range States were listed in Species+, the extinct or possibly extinct range State(s) are listed with 'extinct' or 'extinct?' indicated in parentheses. No taxa in the output have any Parties with reservations, consequently this column is not reported.

**Year CITES listed:** the year a given taxon was first listed in its current CITES Appendix, with the year first listed in CITES (if originally listed in a different Appendix) provided in parentheses.

---

<sup>22</sup> A trade record was defined as a unique row of trade in a CITES annual trade report, forming all or part of a reported permit and with a quantity greater than zero.

<sup>23</sup> [https://trade.cites.org/cites\\_trade\\_guidelines/en-CITES\\_Trade\\_Database\\_Guide.pdf](https://trade.cites.org/cites_trade_guidelines/en-CITES_Trade_Database_Guide.pdf)

**Table 5. Output 4:** Summary of Appendix II taxa for which there has been less than or equal to five trade records for both (i) sources C and D and (ii) all other sources (wild and ‘other sources’ combined), between 2013-2022. Species/subspecies included in higher taxon listings (e.g. Felidae spp.) are not included. Trade data extracted from the CITES Trade Database on 12<sup>th</sup> April 2024. See Key on page 16.
